

Masonry & Concrete Condition Assessments Remote Inspection & Monitoring using ultra light remotely operated aerial vehicles

- PJ Materials Consultants Ltd is pleased to announce the extension of its condition assessment capability by the introduction of remotely operated ultra lightweight aerial vehicles (drones) to aid in the inspection and monitoring of masonry and concrete buildings and structures.

- Now we can provide close up inspection of those difficult to access locations ~ without the need for rental of a boom truck and operator.
- Each drone is fitted with a remotely operated high performance camera, to provide high definition video and/or images, as well as satellite navigation and “return home” features.
- Now you can utilise the benefits of an experienced investigator to assess the condition of your building or structure using the latest technology to gain access to those difficult-to-get-to locations.
- All Flight Operations are carried out in accordance with Transport Canada Civil Aviation requirements and are covered by \$2 million liability insurance.
- For more information, please call or email.
